

Customer Retention & Churn Analysis Dashboard Report

This report presents a detailed analysis of customer retention and churn behavior using an interactive Power BI dashboard. The project focuses on identifying factors affecting customer churn, understanding customer behavior patterns, and providing business recommendations to improve retention strategies.

1. Project Objectives

- Analyze customer churn trends and retention patterns.
- Identify high-risk customer groups.
- Evaluate the impact of contracts, payment methods, and services on churn.
- Build interactive business intelligence dashboards.
- Provide actionable business recommendations.

2. Tools & Technologies Used

- Power BI for dashboard creation and visualization.
- DAX for calculations and KPI measures.
- Power Query for data cleaning and transformation.
- Excel/CSV dataset for customer data analysis.

3. Dataset Description

The dataset contains customer-level information including tenure, monthly charges, contract type, payment methods, internet services, and churn status. The data was transformed and modeled for business intelligence reporting.

4. Dashboard Features

- KPI cards displaying total customers, churn customers, and total tenure.
- Churn analysis based on contract types.
- Monthly charges comparison by churn status.
- Funnel chart for customer distribution.
- Interactive slicers for filtering data dynamically.

5. Key Insights

- Month-to-month contract customers show the highest churn rate.
- Customers with higher monthly charges are more likely to leave.
- Long-term contracts improve customer retention.
- Early-stage customers with lower tenure have higher churn probability.

6. Business Recommendations

- Offer discounts for yearly and long-term contracts.
- Improve onboarding experience for new customers.
- Provide loyalty rewards and customer engagement programs.
- Use predictive analytics for identifying high-risk customers.

7. Business Impact

The dashboard enables organizations to make data-driven decisions, improve customer satisfaction, reduce churn-related revenue loss, and optimize customer retention strategies.

8. Future Enhancements

- Machine learning-based churn prediction.
- Real-time dashboard integration.
- Customer segmentation and forecasting.
- AI-powered recommendation systems.

9. Dashboard KPI Summary

Metric	Value
Total Customers	7K
Churn Customers	2K
Total Tenure	228K
Highest Churn Contract	Month-to-Month

Conclusion:

The Customer Retention & Churn Analysis Dashboard provides valuable business insights into customer behavior, retention patterns, and churn risk factors. The dashboard supports strategic decision-making and helps businesses improve customer satisfaction while minimizing customer loss.
